	Percentage: 93.4
2017 2010	C W-1-1 C C C-11 C 00
2017-2018	Govt. Model Senior Secondary School, Sector-28
Class 10th	♥ Faridabad, Haryana

</> PROGRAMMING LANGUAGES

Percentage: 89.4

• C/C++: Intermediate

• Javascript: Intermediate

• Java: Basic

• ReactJS: Basic

• HTML: Intermediate

• ExpressJS: Basic

· CSS: Intermediate

PROJECTS

VoteEase LINK

Online Voting Portal Built with a tech stack comprising Express.js, React.js, MongoDB, and Node.js, this project stands as an innovative online voting portal featuring multiple sections including viewing political parties, result tracking, and voting. The portal consists of two distinct election sections:

Normal Democratic elections, where citizens securely log in with passwords encrypted using **Bcrypt library** and citizens can cast encrypted votes in their respective constituencies, followed by result transparency; and

President Elections, reserved for Shabha (Lok, Rajya) members, who authenticate their identity before casting votes. **The system encrypts votes using AES algorithm** and tallies candidate votes based on the state of origin for Shabha members, promoting a fair and transparent election process.

BookHaven Online LINK

This project is a feature-rich book store application built using ReactJS, ExpressJS, NodeJS, and MongoDB. It offers a user-friendly interface with a homepage displaying a wide range of books, along with a filtering system for sorting by price or category. User registration and login functionalities with password encryption using bcrypt and JSON web tokens ensure secure access.

The application provides separate functionalities for admins and clients. Admins can manage products, categories, and orders, enabling them to create, update, and delete products.
